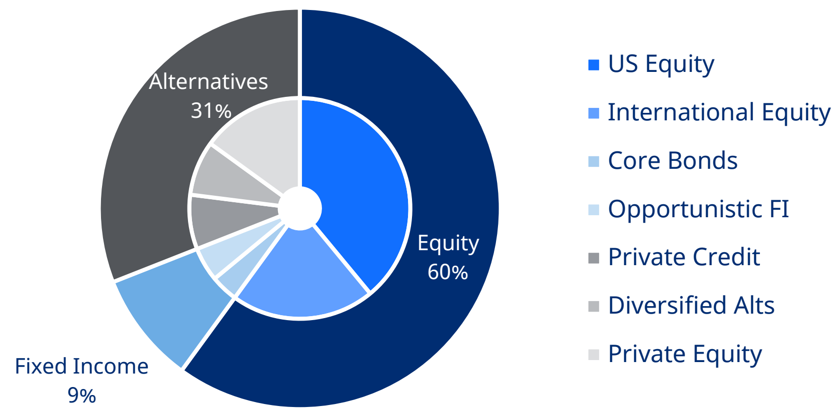
Barnabas Aggressive Growth Fund

The **Barnabas Aggressive Growth Fund** seeks to generate long-term capital appreciation similar to a portfolio of seventy five (75%) percent stocks and twenty five (25%) percent bonds. The fund objectives are appropriate for constituent accounts that are perpetual in nature.

The fund shall be invested in the asset class funds of Barnabas Foundation.

Performance of the fund shall be measured against a blended index consisting of fifty (50%) percent MSCI ACWI IMI index and fifty (50%) percent Bloomberg Aggregate Bond Index. The fund shall also be measured against a blended custom index constructed of the benchmark indices of the asset class funds multiplied by their strategic asset allocation target.

Asset Allocation



Fund	Aggressive Growth
Expected Return	7.9%
Expected Volatility	12.3%

Expected return and volatility are average annualized 10-year projections based on asset allocation analysis from Marquette Associates as of March 31, 2026. It is important to note that these values represent output from software simulations and not deterministic views of future capital market performance. Past results do not guarantee future results and are subject to change as more data becomes available. Please see hypothetical performance disclosures at end of document.

Criteria Used and Assumptions Made in Calculating Hypothetical Performance: Asset Allocation Analysis

The return and risk projections included in this document are based on a Monte Carlo simulation of macroeconomic factors, which are used to model monthly return outcomes of capital markets. The simulations are created by a powerful economic scenario generator that simulates the future performance of the capital markets and macro-economy and are updated quarterly; the underlying models are calibrated based on the long-term historical record, so that they will reproduce the kinds of volatility and stress scenarios that have been observed over the 20th and 21st centuries. The models are linked and correlated so that the behavior of different asset classes and economic variables is consistent within each random scenario.

Total portfolio returns are time weighted, using underlying asset class returns. This assumes that either passive or active management will match or exceed the returns of the indices. Returns are annualized returns based on the average 10-year returns generated in the 1,000 Monte Carlo simulations. The returns for the total portfolio are calculated by the following formula:

$$Ret_{t=i} = [(MV_{t=i} - MV_{t=i-1}) - NetCashFlow_{t=i} - Fee_{t=i}] \,/\, [MV_{t=i-1} + NetCashFlow_{t=i}]$$

Risks and Limitations of Using Hypothetical Performance in Making Investment Decisions

While the asset allocation model incorporates average correlations between asset classes, this can vary depending on what is happening in the market. This is especially true when financial markets are in flux. For example, while we expect international equities to decline in a similar manner to domestic equities, the possibility exists — though unlikely — for the next bear market to be concentrated in the U.S. Every market downturn has its own unique nuances, so while these scenarios demonstrate what might happen and how they could affect a portfolio, it is critical that the investor understands the unpredictable nature of financial markets and that any downturn will not exactly match the generic scenarios and investment decisions should not be made based on hypothetical scenarios. Models cannot capture every potential outcome across all economic scenarios. While re-balancing is incorporated in the construction of each portfolio, the model does not reflect transaction costs associated with re-balancing.

The sources of information used herein are believed to be reliable. Marquette Associates has not independently verified all of the data used herein and its accuracy cannot be guaranteed. Estimates and projections of financial market performance do not guarantee future performance. Since the model used to create this report relies on market data, results will vary depending on the date of the study. Past results do not guarantee future results and are subject to change as more data becomes available.

ABOUT MARQUETTE ASSOCIATES

Marquette was founded in 1986 with the sole objective of providing investment consulting at the highest caliber of service. Our expertise is grounded in our commitment to client service — our team aims to be a trusted partner and as fiduciaries, our clients' interests and objectives are at the center of everything we do. Our approach brings together the real-world experience of our people and our dedication to creativity and critical thinking in order to empower our clients to work towards their goals.

Marquette is an independent investment adviser registered with the U.S. Securities and Exchange Commission under the Investment Advisers Act of 1940, as amended. Registration does not imply a certain level of skill or training. More information about Marquette including our investment strategies, fees and objectives can be found in our ADV Part 2 and Form CRS which are available upon request and on our website. For more information, please visit www.MarquetteAssociates.com.
